Trees tell stories about places. Australia has some of the tallest, oldest, fattest and most unusual trees in the world. Their leaves, flowers and seeds are food for birds, insects and mammals. Old trees have lots of hollows, which make good homes for possums, sugar gliders, birds and bees. But trees aren't just important for other animals, we need them too. What trees breathe out, we breathe in. They are a vital part of the Earth's ecosystems. When you first stand in a forest, the trees all seem the same. But if you look more closely, they are each a little different, like people. This book is a love song to Australian trees, from the red ironbark to the grey gum, the Moreton bay fog to the Queensland bottle tree. Explore the lifecycle of water and discover how this powerful agent affects our landscape and underpins our existence on Earth. This beautifully illustrated children's book takes a close look at the lifecycle of water, including how it supports all life forms, how humans harness its power, and why we need to conserve it. Water is essential for life. In fact, about 60 percent of an adult human is made up of water! We drink it, bathe in it, and thousands of creatures live in it. Yet, our planet is running desperately low on water, with less than one percent of the water on Earth available to fuel and feed the current population of 7.5 billion people.
